                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mucociliary dysfunction is the inability of ciliated epithelium to clear mucus and sputum in lung airways. Mucocillary dysfunction is a serious complication of chronic obstructive lung diseases such as Chronic Eronchitis (CB). Bronchiectasis (BE), asthma and Cystic Pibrosis (CF). In addition, patients suffering from mucociliary dysfunction are susceptible to secondary bacterial infections. A sequence for human placental bikunin has been isolated (see ABB14190 for the protein sequence). Placental bikunin is a Kunitz-type serine protease inhibitor protein, which can stimulate the rate of mucociliary clearance of mucus and sputum in lung airways. Therefore, placental bikunin protein may be sinusitis and glue ear which are caused by retention and accumulation of mucus. The present sequence is an oligonucleotide used in site-directed mucus. The present sequence is an oligonucleotide used in site-directed mucus. The present sequence is an oligonucleotide used in site-directed mucus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                     Primer hSAG.M1 corresponds to nucleotides 151-171 of the human sensitive to apoptosis gene (SAG) cDNA clone provided in AAX87314. It was used with primer SAGT.02-1 (see AAX87338) in the RT-PCR amplification of RNA isolated from 20 human tumour lines and transformed lines originating from lung, brain, kidney, prostate, testis, nasopharynx, bone, cervix and foreskin. 2 SAG deletion mutants (see AAX87315-16) were detected in cancer cell lines
                                                                                                                                                                                                                                                                                                                          SAG: Sensitive to Apoptosis Gene and related proteins, useful promoting cell growth and protecting cells against apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-SEP-1998;

                                      sequences usually correspond mainly to the 3 untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                      New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 redox-sensitive, haem-binding protein that promotes cell growt
protects cells from apoptosis, and scavenges oxygen radicals.
                                                                                                                                                                               mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST

                                                                                                                                                                                                                                                                      The invention relates to a human colon tumour expressed polynucleotide (II, angel) encoding a polypeptide (II, ABB679991-ABB679996) comprising; (i) any of 2600 fully defined nucleotide sequences (ABV8669-ABV89289); (ii) complements of (i); (iii) at least 20 contiguous residues of (i); (iv) sequences that hybridize to (i); under moderately stringent conditions; (v) sequences having at least 75% or 90% identity to (i); or (vi) sequences having at least 75% or 90% identity to (i); or (vi) degenerate variants of (i). The compositions and methods of the present invention are useful for the diagnosis, prevention and/or treatment of cancer, particularly colon cancer. (I) can be used in gene therapy and (II) and (II) are useful in pharmaceutical compositions such as vaccines. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; colon; cancer; cytostatic; tumour; gene therapy; vaccine; gene;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABV87139;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-NOV-2000; 2000US-25222P.

                                                                                                                                                          This sequence encodes a protein kinase which is an HRR25-like protein. Host cells stably transformed with the protein kinase CC encoding DNA may be used for the expression of the protein kinase such that the expressed protein is "displayed" on the host cell color for antibodies. The host cells may also be used for the production CC protein the cell surface or from the culture medium. CC recombinant HRR25 like proteins display a number of properties which CC recombinant HRR25 like proteins display a number of properties which CC recombination for the protein tryrosine kinases e.g. the HRR25 operates to protein possesses both protein-tryrosine kinase and CC protein serihe/threonine kinase activities. Also, HRR25 operates to composite repair of DNA strand breaks at a specific nucleotide sequence CC protein serihe/threonine kinase activities. Also, HRR25 operates to composite the only protein kinases known to have such CC proteins and host cells expressing them are useful in screening compositions on CC methods designed to examine the effects of various compositions on CC may be a composition of CC proteins are casein kinase activities of the protein. The CC proteins are casein kinase class I protein kinases.

HRR25 operates to promote repair of DNA strand breaks at a specific nucleotide sequence and is the only protein-kinase known to have such recombination/repair promoting activity. DNA encoding HRR25 can be used to isolate and identify related sequences, while recombinant HRR25, or cells expressing it, can be used to screen compounds for their effects
                      Human; colon cancer; colon cancer antigen; diagnosis; detection; colorectal carcinoma; ss.
                                                             Human colon
                                                                                                                                                                                                                                                                                                     Sequence 2405 BP; 849 A; 392 C; 486 G;

Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletion in a patient's genome that affect the activity of P by expressing the protein of the activity of P by expressing the protein of the activity of P by expressing the protein of the activity of P by expressing the protein of the pro

The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating clisorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity amid to produce other types of data and products dependent on DNA and cliagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the print of the prin

The microarray of this invention presents a far great diversity of probes for measuring gene expression, with far less bit than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              26-MAY-2000;

The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition analysis is useful for prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this pattent did not form part of the printed specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 355 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid
                                    measuring human gene expression in a sample derived from human heart present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derifrom the human heart via microarrays. By measuring gene expression, probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular seg. cardiovascular disease, hypertension, cardiac arrhythmias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    at

                                                                                                                                                                                                        The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system, diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer; ss.
